DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a method for adapting to specific needs an integrated circuit, classified in class 438, subclass 118.
- II. Claims 7-8, drawn to an integrated circuit, classified in class 257, subclass 758.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group II invention could be made by a materially different process. For example, selectivity forming the insulating layer to expose the facing edges of the metal regions of determined pairs, instead of forming the insulating layer and then etching the insulating layer to expose the facing edges of the metal regions of determined pairs.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
